

in Figure 2. At the top of the list are non-depository institutions (mortgage and other loan companies) and security brokers. With the remarkable advances in the financial sector, this is no surprise. Yet in both of these sectors, Indiana again outperformed the nation.

Riverboats made our amusements and recreation sector a top performer. In fact, with the exception of electronic equipment, Indiana outperformed the nation in each sector noted in Figure 2. The state's greatest advantage over the nation during the past 10 years came in textile mill products (7.4% growth in Indiana versus 1.1% in the nation) and in motor vehicle production (6.4% versus 1.4%).

**These data are not adjusted for inflation and include the District of Columbia in the rankings.*

Per Capita Personal Income Growth

Per capita personal income (PCPI) in Indiana rose to \$26,143 in 1999, according to figures released by the U.S. Bureau of Economic Analysis. This was a 3.8% increase for the year, compared with a national growth rate of 4.5%. Massachusetts led the nation at 6.5%, while North Carolina realized only a 2.2% increase.

When viewed over the course of the past decade, PCPI in Indiana advanced faster than in the nation. This reverses a two-decade pattern in which Indiana trailed the nation in growth of PCPI (see Figure 3).

The economic and demographic changes of the past 40 years have vastly altered the PCPI rankings of

states (see Figure 4). Indiana finds itself coupled with California and Ohio in moving down 12 places in the PCPI ranking (from 21st in 1959 to 33rd in 1999). All of Indiana's neighbors also fell in the rankings during this period: Kentucky moved down just one place from 43rd to 44th; Illinois fell from eighth to 10th; Ohio moved from 14th

to 26th; Michigan went from 12th to 21st; and Wisconsin fell from 19th to 24th. The biggest gains were made by Virginia (19 places, from 36th to 17th) and Georgia (42nd to 25th). As a matter of national policy, these results should not be disturbing. The top eight gainers included only one state (Minnesota) that was in the top 25 in 1959. South Carolina was 50th and North Carolina 46th in 1959, and they

advanced to 41st and 34th, respectively.

Several western states with fast population growth moved down dramatically in the rankings. (Increased numbers of children and retired persons tend to reduce PCPI.) In a similar fashion, slow population growth can lead to higher PCPI rankings (South Dakota rose from 47th to 39th).
